The Laboratory for Molecular Photobioenergetics in the Biological Research Centre Szeged (Hungary) is searching for a PhD student and a postdoctoral researcher

**Research topics:** The biosynthesis and the transport of ascorbate and its roles in photosynthesis and algal biohydrogen production.  
Our newly formed research group in the Biological Research Centre Szeged (www.brc.hu) investigates novel roles of ascorbate in the plant cell, its transport and its biosynthesis using various molecular biology, biochemical and biophysical tools. Our other field of interest is the photobiological hydrogen production in the green alga *Chlamydomonas reinhardtii*, in particular the regulation of the photosynthetic electron transport during biohydrogen production.  
The candidates should have MSc/PhD in biology, biochemistry or molecular biology and fluency in English.

**Deadlines for application:**  
PhD students: 20th of February 2015  
Postdoctoral researchers: 1st of June 2015.
